Background	metal regulatory transcription factor 1(MTF1) Homo sapiens This gene encodes a transcription factor that induces expression of metallothioneins and other genes involved in metal homeostasis in response to heavy metals such as cadmium, zinc, copper, and silver. The protein is a nucleocytoplasmic shuttling protein that accumulates in the nucleus upon heavy metal exposure and binds to promoters containing a metal-responsive element (MRE). [provided by RefSeq, Jul 2008],
Other	MTF1, Metal regulatory transcription factor 1 (MRE-binding transcription factor) (Transcription factor MTF-1)
