Background	neuralized E3 ubiquitin protein ligase 2(NEURL2) Homo sapiens This gene encodes a protein that is involved in the regulation of myofibril organization. This protein is likely the adaptor component of the E3 ubiquitin ligase complex in striated muscle, and it regulates the ubiquitin-mediated degradation of beta-catenin during myogenesis. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, Jun 2013],
Other	NEURL2, Neuralized-like protein 2
