Conjugation			
Background	<p>function:Related to nucleologenesis, may play a role in the maintenance of the fundamental structure of the fibrillar center and dense fibrillar component in the nucleolus. It has intrinsic GTPase and ATPase activities. May play an important role in transcription catalyzed by RNA polymerase I.,PTM:Undergoes rapid and massive phosphorylation/dephosphorylation cycles on CK2 and PKC sites. There is evidence suggesting that CDC2 kinase phosphorylates p130 at the M-phase.,similarity:Contains 1 LisH domain.,subcellular location:Shuttles between the nucleolus and the cytoplasm. At telophase it begins to assemble into granular-like pre-nucleolar bodies which are subsequently relocated to nucleoli at the early G1-phase.,subunit:Interacts with RNA polymerase I 194 kDa subunit (RPA194) and with casein kinase-II.,</p>		
Other	NOLC1, Nucleolar and coiled-body phosphoprotein 1
