Conjugation			
Background	protein O-fucosyltransferase 1(POFUT1) Homo sapiens This gene encodes a member of the glycosyltransferase O-Fuc family. This enzyme adds O-fucose through an O-glycosidic linkage to conserved serine or threonine residues in the epidermal growth factor-like repeats of a number of cell surface and secreted proteins. O-fucose glycans are involved in ligand-induced receptor signaling. Alternative splicing of this gene results in two transcript variants encoding different isoforms. [provided by RefSeq, Jul 2008],		
Other	POFUT1, GDP-fucose protein O-fucosyltransferase 1
