Background	<p>tumor necrosis factor superfamily member 4(TNFSF4) Homo sapiens</p> <p>This gene encodes a cytokine of the tumor necrosis factor (TNF) ligand family. The encoded protein functions in T cell antigen-presenting cell (APC) interactions and mediates adhesion of activated T cells to endothelial cells. Polymorphisms in this gene have been associated with Sjogren's syndrome and systemic lupus erythematosus. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2014],</p>		
Other	TNFSF4, Tumor necrosis factor ligand superfamily member 4
