Background	<p>prolyl 3-hydroxylase 2(P3H2) Homo sapiens This gene encodes a member of the prolyl 3-hydroxylase subfamily of 2-oxo-glutarate-dependent dioxygenases. These enzymes play a critical role in collagen chain assembly, stability and cross-linking by catalyzing post-translational 3-hydroxylation of proline residues. Mutations in this gene are associated with nonsyndromic severe myopia with cataract and vitreoretinal degeneration, and downregulation of this gene may play a role in breast cancer. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Dec 2011],</p>		
Other	LEPREL1 MLAT4 P3H2, Prolyl 3-hydroxylase 2 (EC 1.14.11.7) (Lepreca-like protein 1) (Myxoid liposarcoma-associated protein 4)
