Clonality	Polyclonal		
Isotype	IgG		
Conjugation			
Background	pro-apoptotic WT1 regulator(PAWR) Homo sapiens The tumor suppressor WT1 represses and activates transcription. The protein encoded by this gene is a WT1-interacting protein that itself functions as a transcriptional repressor. It contains a putative leucine zipper domain which interacts with the zinc finger DNA binding domain of WT1. This protein is specifically upregulated during apoptosis of prostate cells. Other	PAWR, PRKC apoptosis WT1 regulator protein
