Background	parathyroid hormone 2 receptor(PTH2R) Homo sapiens The protein encoded by this gene is a member of the G-protein coupled receptor 2 family. This protein is a receptor for parathyroid hormone (PTH). This receptor is more selective in ligand recognition and has a more specific tissue distribution compared to parathyroid hormone receptor 1 (PTH1R). It is activated only by PTH and not by parathyroid hormone-like hormone (PTHrP) and is particularly abundant in brain and pancreas. Alternative splicing results in multiple transcript variants. Other	PTH2R PTHR2, Parathyroid hormone 2 receptor (PTH2 receptor)
