Background	related RAS viral (r-ras) oncogene homolog 2(RRAS2) Homo sapiens This gene encodes a member of the R-Ras subfamily of Ras-like small GTPases. The encoded protein associates with the plasma membrane and may function as a signal transducer. This protein may play an important role in activating signal transduction pathways that control cell proliferation. Mutations in this gene are associated with the growth of certain tumors. Pseudogenes of this gene are found on chromosomes 1 and 2. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Apr 2010],		
Other	RRAS2 TC21, Ras-related protein R-Ras2 (Ras-like protein TC21) (Teratocarcinoma oncogene)
