Background	solute carrier family 26 member 4(SLC26A4) Homo sapiens Mutations in this gene are associated with Pendred syndrome, the most common form of syndromic deafness, an autosomal-recessive disease. It is highly homologous to the SLC26A3 gene; they have similar genomic structures and this gene is located 3' of the SLC26A3 gene. The encoded protein has homology to sulfate transporters. [provided by RefSeq, Jul 2008],
Other	SLC26A4 PDS, Pendrin (Sodium-independent chloride/iodide transporter) (Solute carrier family 26 member 4)
