Conjugation			
Background	KH RNA binding domain containing, signal transduction associated 1(KHDRBS1) Homo sapiens This gene encodes a member of the K homology domain-containing, RNA-binding, signal transduction-associated protein family. The encoded protein appears to have many functions and may be involved in a variety of cellular processes, including alternative splicing, cell cycle regulation, RNA 3'-end formation, tumorigenesis, and regulation of human immunodeficiency virus gene expression. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Dec 2012],		
Other	KHDRBS1, KH domain-containing RNA-binding signal transduction-associated protein 1
