Background	prolyl 3-hydroxylase family member 4 (non-enzymatic)(P3H4) Homo sapiens This nucleolar protein was first characterized because it was an autoantigen in cases on interstitial cystitis. The protein, with a predicted molecular weight of 50 kDa, appears to be localized in the particulate compartment of the interphase nucleolus, with a distribution distinct from that of nucleolar protein B23. During mitosis it is associated with chromosomes. [provided by RefSeq, Jul 2008],
Other	LEPREL4 NOL55 SC65, Synaptonemal complex protein SC65 (Leprecan-like protein 4) (Nucleolar autoantigen No55)
