Background	solute carrier family 6 member 3(SLC6A3) Homo sapiens This gene encodes a dopamine transporter which is a member of the sodium- and chloride-dependent neurotransmitter transporter family. The 3' UTR of this gene contains a 40 bp tandem repeat, referred to as a variable number tandem repeat or VNTR, which can be present in 3 to 11 copies. Variation in the number of repeats is associated with idiopathic epilepsy, attention-deficit hyperactivity disorder, dependence on alcohol and cocaine, susceptibility to Parkinson disease and protection against nicotine dependence.[provided by RefSeq, Nov 2009],
Other	SLC6A3 DAT1, Sodium-dependent dopamine transporter (DA transporter) (DAT) (Solute carrier family 6 member 3)
