Background	sex comb on midleg-like 2 (Drosophila)(SCML2) Homo sapiens This gene encodes a member of the Polycomb group proteins. These proteins form the Polycomb repressive complexes which are involved in transcriptional repression. The encoded protein binds histone peptides that are monomethylated at lysine residues and may be involved in regulating homeotic gene expression during development. [provided by RefSeq, Jun 2010],
Other	SCML2, Sex comb on midleg-like protein 2
