Conjugation			
Background	C-X-C motif chemokine ligand 12 (CXCL12) Homo sapiens This antimicrobial gene encodes a stromal cell-derived alpha chemokine member of the interleukin family. The encoded protein functions as the ligand for the G-protein coupled receptor, chemokine (C-X-C motif) receptor 4, and plays a role in many diverse cellular functions, including embryogenesis, immune surveillance, inflammation response, tissue homeostasis, and tumor growth and metastasis. Mutations in this gene are associated with resistance to human immunodeficiency virus type 1 infections. Multiple transcript variants encoding different isoforms have been found for this gene. Other	CXCL12, Stromal cell-derived factor 1
