Background	synaptotagmin 15(SYT15) Homo sapiens This gene encodes a member of the Synaptotagmin (Syt) family of membrane trafficking proteins. Members of this family contain a transmembrane region and a C-terminal-type tandem C2 domain. Unlike related family members, the encoded protein may be involved in membrane trafficking in non-neuronal tissues. Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008],
Other	SYT15, Synaptotagmin-15 (Chr10Syt) (Synaptotagmin XV) (SytXV)
