Background	TEA domain transcription factor 1(TEAD1) Homo sapiens This gene encodes a ubiquitous transcriptional enhancer factor that is a member of the TEA/ATTS domain family. This protein directs the transactivation of a wide variety of genes and, in placental cells, also acts as a transcriptional repressor. Mutations in this gene cause Sveinsson's chorioretinal atrophy. Additional transcript variants have been described but their full-length natures have not been experimentally verified. [provided by RefSeq, May 2010],		
Other	TEAD1, Transcriptional enhancer factor TEF-1; TEA domain family member 1; TEAD-1; Transcription factor 13; TCF-13
