<b>Background</b>	trafficking protein particle complex 2 like(TRAPPC2L) Homo sapiens This gene encodes a protein that interacts with the tethering factor trafficking protein particle (TRAPP complex). TRAPP complexes mediate the contact between vesicles and target membranes, and thus, are involved in vesicle-mediated transport of proteins and lipids. The encoded protein is related to the X-linked trafficking protein particle complex 2. A related pseudogene is located on the X chromosome. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2016],
<b>Other</b>	TRAPPC2L HSPC126, Trafficking protein particle complex subunit 2-like protein
