Background	<p>taste 1 receptor member 1(TAS1R1) Homo sapiens The protein encoded by this gene is a G protein-coupled receptor and is a component of the heterodimeric amino acid taste receptor T1R1+3. The T1R1+3 receptor responds to L-amino acids but not to D-enantiomers or other compounds. Most amino acids that are perceived as sweet activate T1R1+3, and this activation is strictly dependent on an intact T1R1+3 heterodimer. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jun 2010],</p>		
Other	TAS1R1 GPR70 T1R1 TR1 GM148, Taste receptor type 1 member 1 (G-protein coupled receptor 70)
