<b>Background</b>	thyroid stimulating hormone receptor(TSHR) Homo sapiens The protein encoded by this gene is a membrane protein and a major controller of thyroid cell metabolism. The encoded protein is a receptor for thyrotropin and thyrostimulin, and its activity is mediated by adenylate cyclase. Defects in this gene are a cause of several types of hyperthyroidism. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2008],
<b>Other</b>	TSHR LGR3, Thyrotropin receptor (Thyroid-stimulating hormone receptor) (TSH-R)
