Background	C-X-C motif chemokine ligand 17(CXCL17) Homo sapiens The protein encoded by this gene is a mucosal chemokine that attracts immature dendritic cells and blood monocytes to the lungs. The encoded protein also promotes tumorigenesis through an angiogenic activity. Finally, this protein exhibits strong antimicrobial activity against E. coli, S. aureus, Salmonella, P. aeruginosa, and C. albicans. Two transcript variants, one protein-coding and the other non-protein coding, have been found for this gene. [provided by RefSeq, Dec 2015],		
Other	CXCL17 VCC1 UNQ473/PRO842, VEGF co-regulated chemokine 1 (C-X-C motif chemokine 17) (Dendritic cell and monocyte chemokine-like protein) (DMC)
