<b>Background</b>	VPS54, GARP complex subunit(VPS54) Homo sapiens This gene encodes for a protein that in yeast forms part of a trimeric vacuolar-protein-sorting complex that is required for retrograde transport of proteins from prevacuoles to the late Golgi compartment. As in yeast, mammalian Vps54 proteins contain a coiled-coil region and dileucine motifs. Alternative splicing results in multiple transcript variants encoding different isoforms [provided by RefSeq, Jul 2008],
<b>Other</b>	VPS54, Vacuolar protein sorting-associated protein 54
