<b>Background</b>	Wnt family member 2(WNT2) Homo sapiens This gene is a member of the WNT gene family. The WNT gene family consists of structurally related genes which encode secreted signaling proteins. These proteins have been implicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning during embryogenesis. Alternatively spliced transcript variants have been identified for this gene. [provided by RefSeq, Jul 2008],
<b>Other</b>	WNT2 INT1L1 IRP, Protein Wnt-2 (Int-1-like protein 1) (Int-1-related protein) (IRP)
