<b>Background</b>	X-ray repair cross complementing 2(XRCC2) Homo sapiens This gene encodes a member of the RecA/Rad51-related protein family that participates in homologous recombination to maintain chromosome stability and repair DNA damage. This gene is involved in the repair of DNA double-strand breaks by homologous recombination and it functionally complements Chinese hamster irs1, a repair-deficient mutant that exhibits hypersensitivity to a number of different DNA-damaging agents. <b>Other</b>	XRCC2, DNA repair protein XRCC2; X-ray repair cross-complementing protein 2
