Background	argonaute 3, RISC catalytic component(AGO3) Homo sapiens This gene encodes a member of the Argonaute family of proteins which play a role in RNA interference. The encoded protein is highly basic, contains a PAZ domain and a PIWI domain, and may play a role in short-interfering-RNA-mediated gene silencing. This gene is located on chromosome 1 in a tandem cluster of closely related family members including argonaute 4 and eukaryotic translation initiation factor 2C, 1. Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008],		
Other	EIF2C3 AGO3, Protein argonaute-3 (Argonaute3) (hAgo3) (Eukaryotic translation initiation factor 2C 3) (eIF-2C 3) (eIF2C 3)
