<b>Conjugation</b>	
<b>Background</b>	aryl hydrocarbon receptor(AHR) Homo sapiens The protein encoded by this gene is a ligand-activated helix-loop-helix transcription factor involved in the regulation of biological responses to planar aromatic hydrocarbons. This receptor has been shown to regulate xenobiotic-metabolizing enzymes such as cytochrome P450. Before ligand binding, the encoded protein is sequestered in the cytoplasm; upon ligand binding, this protein moves to the nucleus and stimulates transcription of target genes. <b>Other</b>	AHR, Aryl hydrocarbon receptor
