Background	natriuretic peptide A(NPPA) Homo sapiens The protein encoded by this gene belongs to the natriuretic peptide family. Natriuretic peptides are implicated in the control of extracellular fluid volume and electrolyte homeostasis. This protein is synthesized as a large precursor (containing a signal peptide), which is processed to release a peptide from the N-terminus with similarity to vasoactive peptide, cardiodilatin, and another peptide from the C-terminus with natriuretic-diuretic activity. Mutations in this gene have been associated with atrial fibrillation familial type 6. This gene is located adjacent to another member of the natriuretic family of peptides on chromosome 1. Other	NPPA ANP PND, Natriuretic peptides A (CDD-ANF) (Prepronatriodilatin) [Cleaved into: Cardiodilatin-related peptide (CDP); Atrial natriuretic factor (ANF) (Atrial natriuretic peptide) (ANP)]
