<b>Background</b>	apolipoprotein C4(APOC4) Homo sapiens This gene encodes a lipid-binding protein belonging to the apolipoprotein gene family. The protein is thought to play a role in lipid metabolism. Polymorphisms in this gene may influence circulating lipid levels and may be associated with coronary artery disease risk. This gene is present in a cluster with other related apolipoprotein genes on chromosome 19. Naturally occurring read-through transcription exists between this gene and the neighboring downstream apolipoprotein C-II (APOC2) gene. [provided by RefSeq, Mar 2011],
<b>Other</b>	APOC4, Apolipoprotein C-IV (Apo-CIV) (ApoC-IV) (Apolipoprotein C4)
