<b>Background</b>	ATP synthase, H <sup>+</sup> transporting, mitochondrial F1 complex, O subunit(ATP5O) Homo sapiens The protein encoded by this gene is a component of the F-type ATPase found in the mitochondrial matrix. F-type ATPases are composed of a catalytic core and a membrane proton channel. The encoded protein appears to be part of the connector linking these two components and may be involved in transmission of conformational changes or proton conductance. <b>Other</b>	ATP5O ATPO, ATP synthase subunit O, mitochondrial (Oligomycin sensitivity conferral protein) (OSCP)
