Background	ataxin 10(ATXN10) Homo sapiens This gene encodes a protein that may function in neuron survival, neuron differentiation, and neuritogenesis. These roles may be carried out via activation of the mitogen-activated protein kinase cascade. Expansion of an ATTCT repeat from 9-32 copies to 800-4500 copies in an intronic region of this locus has been associated with spinocerebellar ataxia, type 10. Alternatively spliced transcript variants have been described.[provided by RefSeq, Jul 2016],
Other	ATXN10 SCA10, Ataxin-10 (Brain protein E46 homolog) (Spinocerebellar ataxia type 10 protein)
