Background	beta-2-microglobulin(B2M) Homo sapiens This gene encodes a serum protein found in association with the major histocompatibility complex (MHC) class I heavy chain on the surface of nearly all nucleated cells. The protein has a predominantly beta-pleated sheet structure that can form amyloid fibrils in some pathological conditions. The encoded antimicrobial protein displays antibacterial activity in amniotic fluid. A mutation in this gene has been shown to result in hypercatabolic hypoproteinemia.[provided by RefSeq, Aug 2014],
Other	B2M CDABP0092 HDCMA22P, Beta-2-microglobulin [Cleaved into: Beta-2-microglobulin form pl 5.3]
