

## CD35 rabbit pAb antibody

Catalog No :	Source:	Concentration :	Mol.Wt. (Da):
A12028	Rabbit	1 mg/ml	224290

<b>Applications</b>	WB,ELISA
<b>Reactivity</b>	Human
<b>Dilution</b>	WB 1:500-2000, ELISA 1:10000-20000
<b>Storage</b>	-20°C/1 year
<b>Specificity</b>	CD35 Polyclonal Antibody detects endogenous levels of CD35
<b>Source / Purification</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Immunogen</b>	The antiserum was produced against synthesized peptide derived from the Internal region of human CR1/CR1L. AA range:300-350 & 740-790
<b>Uniprot No</b>	P17927/Q2VPA4
<b>Alternative names</b>	complement component (3b/4b) receptor 1/2 (Knops blood group)
<b>Form</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Clonality</b>	Polyclonal
<b>Isotype</b>	IgG
<b>Conjugation</b>	
<b>Background</b>	<p>complement C3b/C4b receptor 1 (Knops blood group)(CR1) Homo sapiens</p> <p>This gene is a member of the receptors of complement activation (RCA) family and is located in the &amp;#x201c;cluster RCA&amp;#x201c; region of chromosome 1. The gene encodes a monomeric single-pass type I membrane glycoprotein found on erythrocytes, leukocytes, glomerular podocytes, and splenic follicular dendritic cells. The Knops blood group system is a system of antigens located on this protein. The protein mediates cellular binding to particles and immune complexes that have activated complement. Decreases in expression of this protein and/or mutations in its gene have been associated with gallbladder carcinomas, mesangiocapillary glomerulonephritis, systemic lupus erythematosus and sarcoidosis. Mutations in this gene have also been associated with a reduction in Plasmodium falciparum rosetting, conferring protection against severe malaria. Alternate allele-specific splice variants</p>
<b>Other</b>	, CD35
