Background	leukocyte immunoglobulin like receptor A4(LILRA4) Homo sapiens This gene encodes an immunoglobulin-like cell surface protein that is expressed predominantly on plasmacytoid dendritic cells (PDCs) and modulates the function of these cells in the immune response. Expression of this gene is downregulated by interleukin 3 (IL3). This gene is one of a cluster of highly related genes located at chromosomal region 19q13.4. [provided by RefSeq, Jan 2015],
Other	LILRA4, Leukocyte immunoglobulin-like receptor subfamily A member 4
