Clonality	Polyclonal
Isotype	IgG
Conjugation	
Background	solute carrier family 3 member 2(SLC3A2) Homo sapiens This gene is a member of the solute carrier family and encodes a cell surface, transmembrane protein. The protein exists as the heavy chain of a heterodimer, covalently bound through di-sulfide bonds to one of several possible light chains. The encoded transporter plays a role in regulation of intracellular calcium levels and transports L-type amino acids. Alternatively spliced transcript variants, encoding different isoforms, have been characterized. [provided by RefSeq, Nov 2010],
Other	SLC3A2, 4F2 cell-surface antigen heavy chain
