<b>Background</b>	ChaC glutathione specific gamma-glutamylcyclotransferase 1(CHAC1) Homo sapiens This gene encodes a member of the gamma-glutamylcyclotransferase family of proteins. The encoded protein has been shown to promote neuronal differentiation by deglycosylation of the Notch receptor, which prevents receptor maturation and inhibits Notch signaling. This protein may also play a role in the unfolded protein response, and in regulation of glutathione levels and oxidative balance in the cell. Elevated expression of this gene may indicate increased risk of cancer recurrence among breast and ovarian cancer patients. [provided by RefSeq, Sep 2016],
<b>Other</b>	CHAC1 BOTCH, Cation transport regulator-like protein 1 (Blocks Notch protein) (Botch)
