<b>Background</b>	ceroid-lipofuscinosis, neuronal 6, late infantile, variant(CLN6) Homo sapiens This gene is one of eight which have been associated with neuronal ceroid lipofuscinoses (NCL). Also referred to as Batten disease, NCL comprises a class of autosomal recessive, neurodegenerative disorders affecting children. The genes responsible likely encode proteins involved in the degradation of post-translationally modified proteins in lysosomes. The primary defect in NCL disorders is thought to be associated with lysosomal storage function. [provided by RefSeq, Oct 2008],
<b>Other</b>	CLN6, Ceroid-lipofuscinosis neuronal protein 6
