Background	cut like homeobox 1(CUX1) Homo sapiens The protein encoded by this gene is a member of the homeodomain family of DNA binding proteins. It may regulate gene expression, morphogenesis, and differentiation and it may also play a role in the cell cycle progression. Several alternatively spliced transcript variants encoding different isoforms have been identified.[provided by RefSeq, Feb 2011],
Other	CUX1, Homeobox protein cut-like 1/Protein CASP
