Background	destrin, actin depolymerizing factor(DSTN) Homo sapiens The product of this gene belongs to the actin-binding proteins ADF family. This family of proteins is responsible for enhancing the turnover rate of actin in vivo. This gene encodes the actin depolymerizing protein that severs actin filaments (F-actin) and binds to actin monomers (G-actin). Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008],
Other	DSTN ACTDP DSN, Destrin (Actin-depolymerizing factor) (ADF)
