Background	diaphanous related formin 2(DIAPH2) Homo sapiens The product of this gene belongs to the diaphanous subfamily of the formin homology family of proteins. This gene may play a role in the development and normal function of the ovaries. Defects in this gene have been linked to premature ovarian failure 2. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008],
Other	DIAPH2 DIA, Protein diaphanous homolog 2 (Diaphanous-related formin-2) (DRF2)
