Conjugation			
Background	TNF receptor superfamily member 10a(TNFRSF10A) Homo sapiens The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor is activated by tumor necrosis factor-related apoptosis inducing ligand (TNFSF10/TRAIL), and thus transduces cell death signal and induces cell apoptosis. Studies with FADD-deficient mice suggested that FADD, a death domain containing adaptor protein, is required for the apoptosis mediated by this protein. [provided by RefSeq, Jul 2008],		
Other	TNFRSF10A, Tumor necrosis factor receptor superfamily member 10A
