<b>Background</b>	desmoglein 4(DSG4) Homo sapiens This gene encodes a member of the desmoglein subgroup of desmosomal cadherins. The encoded preproprotein is proteolytically processed to generate the mature protein. This protein is a transmembrane component of desmosomes and may play a role in cell-cell adhesion in epithelial cells. Mutations in the gene are associated with localized autosomal recessive hypotrichosis and monilethrix, characterized by impaired hair growth. [provided by RefSeq, May 2016],
<b>Other</b>	DSG4 CDHF13, Desmoglein-4 (Cadherin family member 13)
