<b>Isotype</b>	IgG
<b>Conjugation</b>	
<b>Background</b>	engulfment and cell motility 1(ELMO1) Homo sapiens This gene encodes a member of the engulfment and cell motility protein family. These proteins interact with dedicator of cytokinesis proteins to promote phagocytosis and cell migration. Increased expression of this gene and dedicator of cytokinesis 1 may promote glioma cell invasion, and single nucleotide polymorphisms in this gene may be associated with diabetic nephropathy. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Aug 2013],
<b>Other</b>	ELMO1, Engulfment and cell motility protein 1
