Background	erythroblast membrane associated protein (Scianna blood group)(ERMAP) Homo sapiens The protein encoded by this gene is a cell surface transmembrane protein that may act as an erythroid cell receptor, possibly as a mediator of cell adhesion. Polymorphisms in this gene are responsible for the Scianna/Radin blood group system. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Jul 2008],
Other	ERMAP RD SC, Erythroid membrane-associated protein (hERMAP) (Radin blood group antigen) (Scianna blood group antigen)
