Background	endothelial cell specific molecule 1(ESM1) Homo sapiens This gene encodes a secreted protein which is mainly expressed in the endothelial cells in human lung and kidney tissues. The expression of this gene is regulated by cytokines, suggesting that it may play a role in endothelium-dependent pathological disorders. The transcript contains multiple polyadenylation and mRNA instability signals. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2008],
Other	ESM1, Endothelial cell-specific molecule 1 (ESM-1)
