<b>Conjugation</b>			
<b>Background</b>	<p>endothelin receptor type A(EDNRA)    Homo sapiens    This gene encodes the receptor for endothelin-1, a peptide that plays a role in potent and long-lasting vasoconstriction. This receptor associates with guanine-nucleotide-binding (G) proteins, and this coupling activates a phosphatidylinositol-calcium second messenger system. Polymorphisms in this gene have been linked to migraine headache resistance. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009],</p>		
<b>Other</b>	EDNRA, Endothelin-1 receptor
