Conjugation			
Background	EGF containing fibulin like extracellular matrix protein 1(EFEMP1) Homo sapiens This gene encodes a member of the fibulin family of extracellular matrix glycoproteins. Like all members of this family, the encoded protein contains tandemly repeated epidermal growth factor-like repeats followed by a C-terminus fibulin-type domain. This gene is upregulated in malignant gliomas and may play a role in the aggressive nature of these tumors. Mutations in this gene are associated with Doyme honeycomb retinal dystrophy. Alternatively spliced transcript variants that encode the same protein have been described.[provided by RefSeq, Nov 2009],		
Other	EFEMP1, EGF-containing fibulin-like extracellular matrix protein 1
