<b>Background</b>	growth arrest specific 2(GAS2) Homo sapiens The protein encoded by this gene is a caspase-3 substrate that plays a role in regulating microfilament and cell shape changes during apoptosis. It can also modulate cell susceptibility to p53-dependent apoptosis by inhibiting calpain activity. Multiple alternatively spliced variants, encoding the same protein, have been identified. [provided by RefSeq, Jan 2009],
<b>Other</b>	GAS2, Growth arrest-specific protein 2 (GAS-2)
