<b>Conjugation</b>			
<b>Background</b>	glycerol kinase(GK) Homo sapiens The protein encoded by this gene belongs to the FGGY kinase family. This protein is a key enzyme in the regulation of glycerol uptake and metabolism. It catalyzes the phosphorylation of glycerol by ATP, yielding ADP and glycerol-3-phosphate. Mutations in this gene are associated with glycerol kinase deficiency (GKD). Alternatively spliced transcript variants encoding different isoforms have been found for this gene. <b>Other</b>	GK/GK3P, Putative glycerol kinase 3
