Background	glycoprotein nmb(GPNUMB) Homo sapiens The protein encoded by this gene is a type I transmembrane glycoprotein which shows homology to the pMEL17 precursor, a melanocyte-specific protein. GPNUMB shows expression in the lowly metastatic human melanoma cell lines and xenografts but does not show expression in the highly metastatic cell lines. GPNUMB may be involved in growth delay and reduction of metastatic potential. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008],
Other	GPNUMB HGFIN NMB UNQ1725/PRO9925, Transmembrane glycoprotein NMB (Transmembrane glycoprotein HGFIN)
