Conjugation			
Background	G protein-coupled receptor class C group 5 member B(GPRC5B) Homo sapiens This gene encodes a member of the type 3 G protein-coupled receptor family. Members of this superfamily are characterized by a signature 7-transmembrane domain motif. The encoded protein may modulate insulin secretion and increased protein expression is associated with type 2 diabetes. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2015],		
Other	GPRC5B, G-protein coupled receptor family C group 5 member B
